CDS' blend of product integration, industry innovation, and competitive pricing provides customers with unique value as a "one-stop" provider of total solutions.

- Maximize TCO with server, storage and application virtualization
- Assured Collaboration leveraging strong multi-vendor and database integrations
- Mitigate risk and compliance exposure with secure Data Safeguarding

With unmatched offerings, CDS is a sole source for IT solutions to meet requirements for today and for the future.

- SBA SDB certified enterprise
- GSA Schedule #GS-35F-0322M
- Simplified acquisition procedures
- Government IMPAC cards and purchase orders accepted

Solutions

Virtualization

CDS' unparalleled experience in implementing virtualization solutions eases the process of integrating virtualization into clients' business structures, thereby lowering total cost of ownership. This experience has yielded innovative offerings such as

- Virtualized Education and Training Platform
- Mobile Disaster Recovery
- Portable Cross-Stack Applications

CDS works with clients to perform thorough assessments and develop appropriate recommendations for the server, storage, desktop, and application virtualization efforts–driving down costs while improving maintainability and scalability.

Cross-Domain and Trusted Solutions

As a leader in the trusted computing space, CDS offers thin client solutions that provide the highest level of security while driving down total cost of ownership. Additionally, CDS offers the latest in Unified Cross Domain Management Office (UCDMO) approved solutions through partnerships with vendors such as Oracle and Sun. CDS is a preferred partner for the CDSE (Cross-Domain Security Express) framework from Oracle's National Security Group.

When combined with our virtualization solutions the total package improves security and reduces cost, power, cooling and administration burden. Whether the need is for a single or multilevel package, CDS has the architecture, implementation and support services needed to ensure success.

Safeguarding Restricted Data

As applications continue to come under cyber-attack from both external and internal threats, data guards must be strengthened to mitigate exposure and maintain compliance. CDS helps deliver content appropriately, with custom-designed solutions from leading hardware and software providers. CDS Data Safeguarding Solutions allow the free, but secure, flow of information inter-organizationally.

Services

Application & Technology Consulting

- Oracle Database Administration and Management
- Oracle High-Performance Application Development
- Database / Application Security
- Oracle eBusiness Suite Financials
- Program Management / Project Leadership
- Data Warehousing / Data Mining
- Business Intelligence
- Information Rights Management
- Database Enterprise Management
- Database Performance Tuning and Design
- High-Availability and Disaster Recovery Solutions
- Database and Application Migrations
- Oracle Compliance Audits
- Authorized Oracle Training and Education Vendor
- Customized Training
- Classroom Instruction in Albuquerque, NM and Honolulu, HI

Engineering Professional Services

- Enterprise Server and Storage Solutions
- Cross-Domain and Thin Client Architecture
- Virtualized Infrastructure Architecture
- Server and Storage Consolidation
- Compliance Storage Solutions
- Network Design and Implementation
- Network Security, VPN, and Load Balancing
- Site Surveys

License Support Services

- Maintenance Contract Consolidation
- On-site System Audits
- Asset and Contract Renewal Tracking
- Extended Warranty and Expirations
- Multi-Year Contracts
- Multi-Vendor Support

Operational Managed Services

CDS provides more than "point" solutions with cross-domain and secure computing solutions. Persistent vigilance is key to ensuring the continual security of customer data. Operational Managed Services provide customers with solutions designed to maintain alertness. CDS performs Security Health Checks as well as ongoing operational application and configuration support, all to verify that data is continually secure. CDS designs and maintains solutions to minimize risk and meet compliance requirements.

High-Performance Computing

CDS elevates traditional High-Performance Computing (HPC) to a higher power. This approach is HPC2–specifically formulated to not only meet the growing demands of our clients but also to bolster application to a heightened degree of efficiency and productivity.

CDS HPC2 is a methodology matching capabilities of traditional HPC, customized for each clients' environment. The result is a highly-productive practice into legacy environments across sections beyond science and engineering. CDS engineering professionals bring extensive technical expertise with adeptness of profiling client infrastructures. CDS' analysis and business practices are leveraged to design a supercomputing systems–perfect for computationally-intensive applications while still supporting maximum performance and return-on-investment.

About CDS

Commercial Data Systems, Inc. (CDS) is an IT consultancy and system integrator specializing in virtualization, database operations, disaster recovery, and cross-domain security. As a trusted advisor for government and commercial clients, CDS partners with many IT providers. CDS' in-house Oracle consulting group has a long history of successful implementations for a wide range of clients. Oracle has also chosen CDS as a preferred partner for its Cross-Domain Security Express (CDSE) data security architecture. Contact CDS for an assessment, database assistance, or just a fresh perspective on your data needs.
